01 PRODUCT INTRODUCTION

1.1 Overview

The U3 Max is Colorlight's next generation video splicer, featuring an integrated video processing and splicing solution. Powered by a robust FPGA architecture, the U3 Max offers a secure and stable software system, making it ideal for diverse applications. Whether for large-scale events, convention centers, stadiums, stage performances, traffic monitoring, or commercial exhibitions, the U3 Max delivers unparalleled reliability and performance.

In addition to an impressive load capacity of 78 million pixels, the U3 Max boasts a modular design that supports flexible combinations of 32 types of boards. It can accommodate 4 to 5 input boards and 3 output boards, with a total of 8 slots available. Input ports include HDMI, DisplayPort (DP), SDI, DVI, HDBaseT, IP, VGA, and CVBS, while output options feature Gigabit Ethernet (GbE), 5G Ethernet, 10G fiber, HDMI, DVI, SDI, and HDBaseT.

The U3 Max is capable of managing various screen types, delivering 4K HDR ultra high-quality video with 10-bit video input and processing. It supports video source cropping, scaling, along with the addition of various display elements, such as background images, OSD, and logos. The unit also supports multiple redundancy options, including fiber ports, Ethernet ports, and power supplies, ensuring high availability. Additional features include dual 4K UHD video preview and monitoring, health monitoring, and email alerts. This versatility makes the U3 Max well-suited for small-pitch LED video walls, LCD video walls, and projection screens.

The Universe series lets you control and manage devices across multiple platforms, such as Windows, macOS, and Linux, all through a web app. With an intuitive user interface, the series enables smooth workflows including real-time collaboration and modular permission management.
